

Experiment 3: Building Corporate Risk Register & Risk Taxonomy

Aim

To build a structured corporate risk register and risk taxonomy in Eramba by defining risk categories, threats, vulnerabilities, and business risks.

Procedure

- 1. Navigate to Risk Management → Business Risks → Settings.
- 2. Create Risk Classification Types such as Risk Category, Likelihood, and Impact.
- 3. Add risk classifications under these types.
- 4. Review the available Threats and Vulnerabilities.
- 5. Configure the Risk Calculation Method using Likelihood and Impact.
- 6. Configure the Risk Appetite/Threshold matrix.
- 7. Create/import business risks under Risk Management → Business Risks.
- 8. Verify the completed risk register.

Output

A risk taxonomy containing classifications, threats, and vulnerabilities was established, and 10 business risks were added to the corporate risk register.
